UNIVERSITATEA  
PETROL-GAZE DIN PLOIEȘTI

---

*Dear graduates of Petroleum and Gas  
University of Ploiesti,*

Our university, which proudly bears the name of Petroleum and Gas, counts its merits through its students and graduates.

In its 68 years of existence, the university has trained tens of thousands of students from Romania or over 70 countries in its amphitheatres, lecture rooms and research laboratories. All these graduates were successful in their careers, irrespective of the country they had come from or worked in. Many of our graduates had or still have important positions in their companies or even in the governmental administration.

No matter what specialisation of the three technical faculties they graduated from, drilling – production, oil and gas transportation, electro-mechanics, electronics, automatics, oil and gas processing, all our graduates are part of “the great family of petroleum engineers”, and that is because their diploma was issued by Petroleum and Gas University of Ploiesti.

All graduates who have ever worked or are still working abroad are real ambassadors of our university and of our country, Romania.

They have managed to transform the name of our university into an international brand.

Dear graduates, the university is proud of you all and we would be extremely honoured if you are also proud of the university you have graduated from. We sincerely hope that you will never forget that you are “petroleum engineers” who graduated from our university.

We invite you to join us in our endeavour to promote our university and to contribute to strengthening the reputation of our university.

Rector  
Prof. Mihai Pascu Coloja PhD

## Our History

The more you know about history, the better you will come to understand our mission and place in the large field of academic life.

The University was founded in Bucharest in 1948, under the name of Petroleum and Gas Institute and it had at the time two faculties: The Faculty of Drilling-Production (later on named The Faculty of Reservoir Engineering and at present the Faculty of Petroleum and Gas Engineering) and the Faculty of Petroleum Refining (later on named the Faculty of Petroleum and Gas Processing and Chemistry and at present the Faculty of Petroleum Refining and Petro-chemistry).

In 1950, the following faculties were added: the Faculty of Oil Machines and Equipment (later on named the Faculty of Technological Equipment, and at present, to better express the field of activity and its specialties, the Faculty of Mechanical and Electrical Engineering), the Faculty of Economics and Organization of Petroleum Industry (it functioned until 1968) and the Faculty of Petroleum and Gas Deposits Geology (later on named the Faculty of Geology due to extending the field of activity after the transfer, in 1957, of the Faculty of Geology from the Geology and Mining Institute of Bucharest).

In 1957, because of these structural changes, Petroleum and Gas Institute changed its name into Petroleum, Gas and Geology Institute of Bucharest. Between 1967 and 1975, Petroleum, Gas and Geology Institute of Bucharest was transferred to Ploiești under the name of Petroleum and Gas Institute, except for the Faculty of Geology, which became part of the University of Bucharest in 1975.

In 1968 short-term (3 years) university training programmes were set up, and in 1972, evening courses education programmes started. Between 1978 and 1989 the academic structure of Petroleum and Gas Institute practically remained unchanged.

In 1992 The Faculty of Letters and Sciences was set up and Petroleum and Gas Institute changed its name into University of Ploiești.

Since the former institute used to be known worldwide for its tradition, the board of the university decided to rename University of Ploiești into Petroleum - Gas University of Ploiești, a name that shows both that new faculties were set up, thus creating a 'university', but also that the old faculties set up in the late forties are still there.

Since 1997 the technical faculties have been included in the FEANI index.

Graduates can be registered in the FEANI register getting the title of European Master of Science EURING, according to the conditions imposed by FEANI.

In 1998 A Teachers' Training Department was set up to deliver courses for teachers' basic and continuous education and in 2001 Open and Distance Learning courses started. In 2002, since the Faculty of Letters and Sciences grew to a very big number of students, splitting it into two faculties was needed. Thus, in 2002 Petroleum - Gas University of Ploiești included among its faculties the Faculty of Economic Sciences, which took over all the economic specializations formerly subsumed to the Faculty of Letters and Sciences.

In the academic year 2005-2006 Petroleum - Gas University of Ploiești restructured the curricula for all its faculties and specializations to meet the European requirements stipulated for academic institutions by the Bologna Project.

In 2000, the postgraduate College of Economic Arbitration Management was founded.

In the field of postgraduate and doctoral studies, Petroleum - Gas University of Ploiești has had a rich tradition ever since 1950 and has obtained outstanding results. Between 1966 and 1982 the university organized postgraduate UNESCO courses in Petroleum Geology (1966-1967; teaching language: French) and in Petrochemistry (1968-1982; teaching language: English).

Ever since 1951, Petroleum - Gas University of Ploiești has organized doctoral studies and it also obtained the right to grant PhD degrees and the title of Doctor Honoris Causa. At present, doctoral studies are organized in the field of Engineering.

In the academic year 2015-2016, the university has 7537 students and 281 academic staff.

At present, the University offers the following educational programmes:

- Bachelor's degree;
- Master's degree;
- Postgraduate teacher training courses;
- Doctoral degrees.

So far, 20 students from the Islamic Republic of Iran have studied and graduated from different specializations of Petroleum and Gas University of Ploiesti, or benefited from other training here.

Their names and the faculties/ specializations they graduated from are presented in this booklet. They have brought great honour to their country and their families.

It is my honour to invite all these graduates to be part of "the great family of the petroleum engineers" and to stay close to the university where they have become specialists in the fields and to enrol in the Association of the Graduates of Petroleum-Gas University of Ploiesti which aims at promoting the values of our institution.

Vice-Rector in Charge of  
International Relations and Partnership  
with the Economic Environment  
Professor MIHAIL MINESCU, PhD
